

hello world

**T****E**X4ht note about the **--texoptions** command line option: you can use this option to pass all command line arguments to **make4ht**. You may need to include the **-** character in the place of filename for the correct execution.

For example, if you want to use the **fn-in** option, use the following command:

```
$ texblend -H -O '- "fn-in"' sample.tex
```

If you want to use for example a configuration file, use

```
$ texblend -l -H -O '-c config.cfg - "fn-in"' sample.tex
```
